

System Components

ClearZone electric snow melting systems are fully automated and maintenance free. The state-of-the-art systems utilize the industry's premier heating cables and mats, as well as an advanced pavement or aerial mounted snow sensor, depending on your needs.

Pavement mount snow sensor

When temperatures are below a set point and the sensor detects precipitation, it signals the controller, which then sends power to the heat cable (or mats) to warm the surface area.

Aerial mount snow sensor

The Warmzone master control unit offers a maintenance-free snow melting system for residential and commercial business owners. The snow melting system controller features manual override capability for times when the wind creates snow drifts on the driveway, or if ice forms due to wind, shade or other conditions.

Snowmelt system controller

Contactor panel

ClearZone heat cable is available on the spool or pre-spaced in mats that can be easily rolled out for quick installation.

Walkways & Custom Areas

ClearZone snow melting systems are easily designed and customized to meet the needs of virtually any type of snowmelt project.

ClearZone Radiant Snow Melting Systems

Heating Concrete

ClearZone radiant heating systems utilize industry leading heat cables and mats that can withstand the stress of heavy concrete pours. The electric snow melting systems feature rapid response times and are

a favorite among construction professionals for both large commercial jobs and residential concrete snow melting projects.

ClearZone radiant heat systems can be easily customized to meet your project's budget and performance needs.

ClearZone snow melting system components.

Heating Under Pavers

ClearZone heating cables and mats are designed to be installed under all types of brick and stone paver applications.

ClearZone heating mats can be rolled out for quick, easy installation.

ClearZone heating mats installed on sand base under stone pavers.

Heating Asphalt

Rugged ClearZone heat cables and mats are designed to withstand the stress and extreme temperatures of hot asphalt installations.

ClearZone snow melting systems are among the most trusted systems available. Featuring top-of-the-line components and

unmatched manufacturer warranties, homeowners and professional contractors know they are installing top, proven solutions when dealing with Warmzone.

We Include Professional Design Services with all Radiant Snow Melting Systems

CLEARZONE

Every Warmzone snow melting project is custom designed to ensure optimum performance that meets the unique needs of each customer. A detailed design includes the electrical requirements, technical specifications and system performance expectations before any heat cable or mats are installed.
