- 1—SFP 24 ga. Kynar Steel Base
- 1—SFP 24 ga. Kynar Steel Valley Connector
- 2—SFP 24 ga. Kynar Steel Caps
- 2—SFP 24 ga. Kynar Steel Expansion Joint

Description

The Sno-Free 4" or 6" Valley Panel is an efficient method to control any ice dams that would form within a valley. Effectively clearing both sides of the valley between 6"-10". The SFP-V panel will create all the open area for water to safely flow from the valley without the possibility to refreeze over unheated portions of the roof. The Sno-Free heated panel system gives an aesthetic look to any structure while keeping a more efficient and cleaner method to eliminate ice dam issues in a valley or dormer. All SFP systems come standard with a durable 30 year Kynar finish to match most desired looks.

Applications

For all buildings with a pitch greater than 4/12

For new roof installations:

- Asphalt Shingle
- Wood Shake Shingles
- Tile or Slate Roofs
- Standing Seam Metal

- ### Key Sections
- | | |
