Roof GraspClips

GENERAL PRODUCT INFORMATION

The Advanced Solution for Securing Roof Heat Tape

Warmzone Roof GraspClips are the preferred heat cable clip for installations on shingle roofs. The GraspClips can be used to install both self-regulating and constant wattage heat cable in areas with and without gutters. No tools are required, and the premier design of the Roof GraspClips allows you to easily reconfigure or remove the heat cable without damaging the roofing materials. Simply bend up the top arms of the clip and reposition the heat tape as needed.

The Roof GraspClips feature an easy-to-work-with design that facilitates quick, accurate installation of heat trace cable on roofs. Its patent-pending design results in securely holding the heat cable without the use of nails. The clips also accommodate difficult configurations more easily than most other roof heat cable clips.

Installing heat tape deep in roof valleys is not a problem with Warmzone's Roof GraspClips. The clips allow heat cables to be placed near the center of the valley unlike nail-on roof clips where it's almost impossible due to the nailing requirements. Additionally, when installing a heat trace de-icing system with GraspClips, you'll generally need less clips than when using standard ice dam heat tape clips. This is because the design of the GraspClip allows for only a single clip on the bottom trough of your heat tape zigzag, instead of two clips (one on each side of the bottom).

FEATURES AND SPECIFICATIONS

Installation:	No tools are required for installation
Construction:	Made of weather resistant high-quality aluminum
Available sizes: (The .325-inch clip fits 95 percent of all asphalt shingles sold in North America.)	.325-inch .625-inch .875-inch.
Finish:	Robust, anodized black finish
Quantity:	25 clips per box
